CONSULTANCY

**Information Systems
& Business Intelligence**

**Building your digital
business of the future**

With our data-driven approach and years of experience, we help you setup the optimal technology infrastructure and automate your operation to accelerate your growth and realize your full productivity potential. Our dynamic framework and rapid-response team enables organizations to streamline their operations and make intelligent decisions based on the right digital strategy and big data practices.

To enhance business outcomes and accelerate results, organizations need to constantly ride the disruptive wave of technology to achieve full automation and operational efficiencies

Whether you are looking to manage your operational digital strategies, implement a transformative solution to automate your business, or upgrade your current infrastructure by integrating new functionality and connecting with other solutions, our experts will lead your way to success by recommending the most optimal approach based on your industry and current infrastructure.

We bring together our intensive experience to help you adopt tech solutions while setting a successful framework to leverage your big data and analytics and bring a culture of insightful decision-making to your organization.

Benefits

 Guaranteed synergy for companies during M&A system integration	 Enhanced customer service
 Increased data accuracy for informed decision-making	 Enhanced collaboration across the organization
 Increased business process efficiency for leaner operations	 Faster reporting, analysis or planning
 Real-time data access for rapid responses	 Increased competitor advantage

Create winning digital transformation strategies to differentiate yourself, harness your capabilities and create sustainable long-term value

Digital Strategy

We help businesses shift their approach to anchor digital strategy into their business strategies by helping them understand and identify their digital transformation objectives as well as set the plan forward to achieve latest technology enablers that respond to their most critical challenges and business needs.

Application Architecture

We work closely with organizations to evaluate their information system (IS) solutions, benchmark against latest tech trends and recommend new or evolved solution designs and architectures that best help them deliver value. This includes leading potential system integrations and data audits to ensure solutions are transformed into multipurpose platforms that connect all aspects of the organization and delivers impact on productivity and cost reduction.

Solution Development & Customization

As we help businesses automate their operation, we build fit-for-purpose solutions with rapid software development support that accelerates capability building and business growth and meets business objectives. From setting and identifying requirements and translating them into end-to-end solution designs, all the way through on-the-ground implementation and customization, testing and training, and providing ongoing system administration support.

Data Analysis and Business Intelligence

We help businesses leverage the power of data and intelligence by setting the right framework to manage different data sources and understand insights that strategically drive decision-making. We help integrate dashboards to collect data and generate reporting and predictive analytics as well as visually interpret results.

System Integration

Whether for mergers and acquisitions or simply to connect multiple/heterogynous businesses among each other's, we advise organizations and recommend the optimal solution to help integrate the core business, with all the processes, systems, and data available in the aim of building an efficient environment with a 360-view of information management. Our experts' team manage multiple projects, throughout the process, using advanced project scheduling capabilities and consult on process re-engineering where they deem necessary to ensure successful integration.

Systems, Processes, & Data Audit

Using a systematic & objective approach, we examine your systems, processes and data to determine whether activities and related results comply with planned arrangements, and whether these arrangements are implemented effectively and are suitable to achieve objectives and offer the opportunity for improvement.

Data Management

We help with the development, execution, supervision of plans, policies, programs, and practices that deliver, control, protect, and enhance the value of data and information assets throughout their lifecycles.

A customizable program to suit your industry

Amongst industries we serve:

Agriculture	Government & Public Services
Consumer Packaged Goods	Hospitality & Leisure
Distribution & Wholesale	Manufacturing & Industrial Products
Education	Pharmaceuticals
Energy, Utilities & Resources	Retail
Engineering & Construction	Transportation & Logistics

« Digital transformation is reshaping businesses worldwide. I believe it is my role to guide clients to transition to the right disruptive technologies and strategies, cater solutions to their needs, and recommend best practices to ensure successful transformation that results in improved performance. »

Antoine Harb

Senior Director
